

## WHAT IS AN EDI AUDIT?

A structured and comprehensive review of an EDI Solution with key deliverables including integration point documentation, defect analysis, flow diagrams, and outsourcing readiness review among others.

## What Does an EDI Audit DO FOR ME?

An EDI Audit allows a company a view of the operations of one of the most difficult systems to understand. An EDI Audit shows in plain English the functionality of the existing EDI Solution within a company, and opportunities to improve on the operations. Whether the goal is to outsource, simply regain control or replace an existing solution, an EDI Audit will provide the information needed to act.

Deliverables of an EDI Audit May Include”

- As-Is EDI Process Flow
- Proposed To-Be Process Flows
- Data Flow Diagram
- Transaction Enablement Review
- Landscape View of EDI & Integrated Systems
- 1-3-5 year EDI Roadmap
- Outsourcing Readiness Review
- Current State Evaluation
- Open Defects Reports
- Opportunity Assessment
- Per Transaction Costs
- Per Trading Partner Costs
- Comparison to the Industry Averages

## Finally Understand Your Company's EDI Subsystem

Companies throughout the world struggle to maintain and grow their EDI and integration solutions. Years of struggling have begun to give EDI a bad name, when really, EDI enablement continues to grow and companies continue to save money over manual processes.

### How Does an EDI Audit Work?

With defined deliverables, an EDI Audit holds the key to making an informed decision regarding your company's EDI system, even if that decision is simply to continue support as-is. The EDI Audit process breaks the barriers of the black box in which EDI often operates. EDIAdmin Analysts use interview and technical review processes to assess and understand an existing EDI system. Using that information a comprehensive set of documentation is created with an eye toward the strategic advance of EDI within an organization.

### Who Needs an EDI Audit?

Prime candidates for EDI Audits include companies that **know they have EDI issues**. These issues often include lost or delayed purchase orders and incorrect or rejected invoices to customers. EDI Audits are great for companies with **inadequate EDI resources**, companies that can not state their **cost per transaction** or **cost per trading partner**, as well as companies simply looking to understand how their EDI environment operates for future decisions regarding ERP and EDI environments.
